FAHL® TRACHEOSPREIZER

sterile

REF 33502

- The Tracheospreizer is used for the dilation of the tracheostoma of tracheostomized and laryngectomized patients
- Also to be used during cannula changing and for emergency interaction, e.g. decannulation
- The special shape of the rounded tips minimizes the risk of injury during insertion
- The three spreadable wings allow the opening of the dilator in all directions and thereby ensure an even circular dilation of the tracheostoma
- Ergonomic design and handling: The dilator opens when the handles are pressed together
- This is conform to the natural ergonomics of manual handling and provides a more sophisticated and fine-tuned control of the dilation process

SCOPE OF DELIVERY

FAHL® Tracheospreizer **REF 33502**
Kunststoff, steril
1 x tracheal dilator
plastic, sterile

FAHL® Tracheospreizer **REF 33502-K**
Kunststoff, steril
10 x tracheal dilator
plastic, sterile
